

Engineering Geomorphology Theory and Practice
 Professor P.G. Fookes, Dr. Mark Lee and Professor J. Griffiths
 This significant book by foremost experts in the field will be the first that truly covers the topic of engineering geomorphology as a distinct discipline and, as such, will be of paramount importance to both practitioners and students.

➔ '...handy source that brings together a wealth of basic data... really does belong on the office shelf where it will soon become very well thumbed.' *Quarterly Journal of Engineering Geology and Hydrogeology*

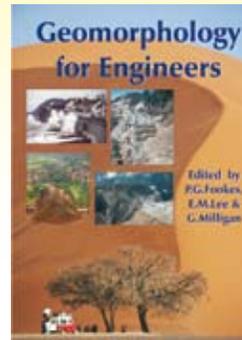

ISBN 978-1904445-38-8 • 297 x 210mm • 312pp • profusely illustrated with a colour section • softback • £40

Geomorphology for Engineers

Professor P.G. Fookes, Dr. Mark Lee and Dr. G. Milligan

This book presents a worldwide view of geomorphology for engineers and other professionals on the near-surface engineering problems associated with the various landscapes.

➔ '...Truly excellent expositions on their subject. ...this excellent and hugely informative book. It should appeal to anyone involved in engineering geology or geotechnical engineering, and comes highly recommended'. *Geoscientist*

ISBN 978-1870325-03-5 • 240 x 170mm • 874pp • over 600 illustrations • cloth • £100

Soil and Rock Description in Engineering Practice

David Norbury

Major New Book!

This is a practical guide to the engineering geological description of soils and rocks in the field. It will be a key text for all practitioners whether they are the logger, the reviewer or the user of field logs. The procedures described are in accordance with the newly-implemented ISO, EN and BS international standards making this the definitive work by an acknowledged expert.

The book is in full colour throughout which benefits the photographs and the many text boxes that provide background information, logging tips and example descriptions. The book should thus be well used rather than sitting on the shelf.

- '...This is a very thorough book and is well presented and printed, with clear tables, helpful thumbnail photographs and figures and text boxes containing tips and example descriptions. It is aimed at the doers and the reviewers. ... The book covers all the new requirements linked to Eurocode 7. ... Buy this book'. *Geoscientist*
- '... Soil and rock description is the core of the engineering geologist's professional specialism and this book will help both the practitioner and their colleagues and clients benefit from objective and consistent descriptions. ...is essential reading for anyone involved in the technical aspects of site characterisation - whether for risk assessment or remediation'. *JISCMAIL Forum book of the month, June 2010*

ISBN 978-1904445-65-4 • 240 x 170mm • 304pp • numerous illustrations + tables, colour throughout
• hardback • £80

Cores and Logging for Geoscientists

Graham A. Blackburn

Updated New Edition!

The previous edition of this book was widely adopted internationally by the petroleum and mining industries and by geotechnical engineers as an authoritative guide for use at the wellsite, in the laboratory or office. This new edition has been brought up-to-date and incorporates modern developments in coring techniques and core handling.

All aspects of cores are covered including cutting and recovery; wellsite handling and logging, recognition of coring damage; laboratory analysis; logging and sampling; preservation and storage. Emphasis is laid throughout on those features most important to the economical development of geological resources. The book will prove invaluable for those working with cores and anyone who uses information derived from them.

- '...it will be a valuable addition to the library of any practising geologist or geoscientist. ...this is an impressive little book that presents practical, sensible guidance on an important topic for several branches of applied geoscience - all based on actual rather than academic experience. I have no hesitation in recommending its purchase to all geologists and geoscientists, but most especially to those who are just starting their professional careers, for whom the book will long remain a trusted companion.' *Geoscientist*

ISBN 978-1904445-39-5 • 240 x 170mm • 160pp • illustrated with a colour section • hardback • £37.50

Rudolph Glossop and the Rise of Geotechnology

Selected Journals, Diaries and Letters

Edited by Ronald E. Williams

New!

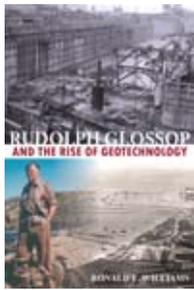

- Extracts from the Foreword by Professor John Burland
'...compelling and written with that style and clarity which is characteristic of Rudolph Glossop. ... He worked as a mine manager in the Gold Coast from 1933 to 1937 ... I had to read from start to finish in one sitting so compelling is it! ...a fascinating and vivid description of Glossop's involvement with the construction of Phoenix units for Mulberry Harbour...

... Reading these letters, and his selected writings, show that Silas Glossop was someone of broad vision, who inspired others to join him in achieving it'.

Rudolph Glossop made a unique contribution to the early development of both geotechnical engineering and engineering geology and this volume presents a perspective on his involvement compiled from extensive personal diaries, letters and also journal papers. From his early experience as an undergraduate and the four years spent in the Gold Coast to the establishment of Soil Mechanics Ltd and his time as director of Mowlems, Glossop became one of the key figures and was involved in many of the key stages in the development of geotechnology.

Ron Williams has painstakingly pieced together a fascinating account of the life and career of an outstanding engineer and not before time will today's engineers and scientists have the opportunity to appreciate the achievements of one of the key figures in geotechnical engineering.

ISBN 978-184995-021-3 • 234 x 156mm • 288pp • hardback • £50

Restoration and Recovery

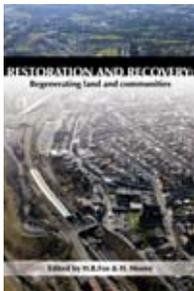

Regenerating land and communities

Dr Howard Fox and Dr Heather Moore

New!

With contributions from academics and practitioners, this, the 8th International Conference of the British Land Reclamation Society, addresses current issues in the restoration and regeneration of brownfield sites. It will focus not only on the technical aspects of land restoration but also on regeneration including planning and community involvement in the successful environmental, economic and social recovery of such sites.

ISBN 978-184995-012-1 • 240 x 170 mm • 352pp • liberally illustrated • hardback • £80

Ground Gas Handbook

Steve Wilson, Geoff Card and Sarah Haines

This vital new handbook provides practical guidance to engineers, regulators and designers about assessing ground gas risk and the design of appropriate protection measures.

- 'The Ground Gas Handbook is an excellent resource for a professional working in the field of contaminated land and who is often confronted with situations where the risks of ground gas have to be considered. ...gives an excellent overview ...the introductory chapters ...are highly recommended for someone just starting in the field or as a brush up of old knowledge'. *Ingeokring Newsletter*

ISBN 978-1904445-68-5 • 234 x 156mm • 192pp • liberally illustrated with a colour section • hardback • £65
